Secure transportation

The FB20 Bike Box is designed specifically for the transportation of motorcycles. It offers secure transport for your bike and all other equipment you wish to transport with it. The crate is strong, modular and lightweight. The crate has bars on both long sides to ensure that the bike is held in place. The model of the wheel clamp depends on the type of motorcycle and can be custom-made. If your bike is dear to you, you transport it in a Fawic box.

The crate

Our crates can withstand all kinds of external influences and are really put to the test, but they are more than up to the job. The FB20 Bike Box offers the best possible protection for all your shipments. Our crates don't have outstanding parts. Any possible damage to the locks can be easily repaired by yourself. It is not necessary to send the crate back to the Netherlands.

Modular system

The crate can be supplied in any specification you require and the interior can be adapted for any desired use. The impact-resistant panels can be removed easily giving you access to your bike from all sides. The sides are interchangeable and can be coupled. Components are the same for every type of crate, are easily exchangeable and available from stock.

100% reusable

Our crates are designed to be durable and reusable and can also be used for temporary storage. Our crates are both environmentally friendly and cost-effective.

Customer review: "The guys did a fantastic job on the crates"
For more information see youtube: Fawic Bike cases.

Fawic is also supplier in MotoGP.
